Continuation Sheet (PTO-303)

Application No.

10/085,489

Applicants' amendments to Claims 1, 8 and 13 have been entered but are not sufficient to distinguish over the teachings of Alexander and put the claims in condition for allowance for the following reasons:

1. the amended limitation "the navigation over the second display portions replaces previously displayed data fields with a display of current datafields along the Z-axis from the second display portion" does not appear to have sufficient support from the cited portion of Applicants' specification (p. 5, line 21 to p. 6, line)

The cited portion merely discloses that to avoid the need for additional select levels, a separate set of keys can be mapped or remapped to control and provide movement options along the z-axis. Applicants' specification further discloses that the Z-axis navigation only requires one key press (note that the language of the specification is "Z-axis navigation," which is reasonably interpreted to mean that the "navigation on the Z-axis," e.g., to move to the right, a user only needs to press the arrow key "-->"). Applicants' application next discloses that all other EPGs require that one navagate (sic) to the "next" Z-axis item and then press a select key to invoke the new item.

As best understood by the examiner, nowhere in the cited portion by Applicants is described "the navigation over the second display portions replaces previously displayed data fields with a display of current datafields along the Z-axis from the second display."

2. Applicants essentially argued that "[i]n other words, as the cursor moves over the second display portion, the data fields represented in the second display portion is displayed long the Z-axis..., without the need to first press a "select" button." It is noted that the features discussed in the argument are not recited in the claims.

With respect to Claims 2-7, which depend from claim 1, please see discussion in the previous Office action.

In view of the above discussion, the rejection of Claims 1-18 under 35 USC 102(e) as being anticipated by Alexander et al. is considered still proper and thus maintained.
